

Successful Medicare Advantage and Part D plans have well-managed, highly efficient enrollment processes. Yet despite the critical importance of this function to health plan success, many struggle to “zero out” discrepancies on a daily, weekly and monthly basis, and properly audit payment accuracy from CMS. Most plans lack a **real-time** connection between operational tasks, transparent reporting, and financials, frustrating staff, managers and executives alike. *Valencia*, Gorman Health Group’s newest software solution, can you help you manage the data that is critical to the success of your enrollment department – from beginning to end.

Keeping Pace

Most recently CMS has been extremely focused on front-end enrollment transactions. This will become even more important with the MARx Modernization Redesign when plans are required to manage daily TRR inventories. Combine this with a squeeze on staffing and you quickly see the need for more powerful tools to handle inventory management.

Real-Time Reporting

Successful enrollment inventory management requires:

- Processors to have efficient, practical tools
 - Managers to have an ability to quickly identify priorities, change direction and report outcomes
 - Senior Leadership to have a real-time operational and financial view of their business

With Valencia, you get all three *and more*.

Efficiency	Accountability	Transparency	Real-time Insight
